

Bindungsförderung  
Krisenintervention  
Körperpsychotherapie

BINDUNGSORIENTIERTE KÖRPERPSYCHOTHERAPIE

## Trauma, Birth and Attachment

Emotional First Aid in Acute Crisis after Birth

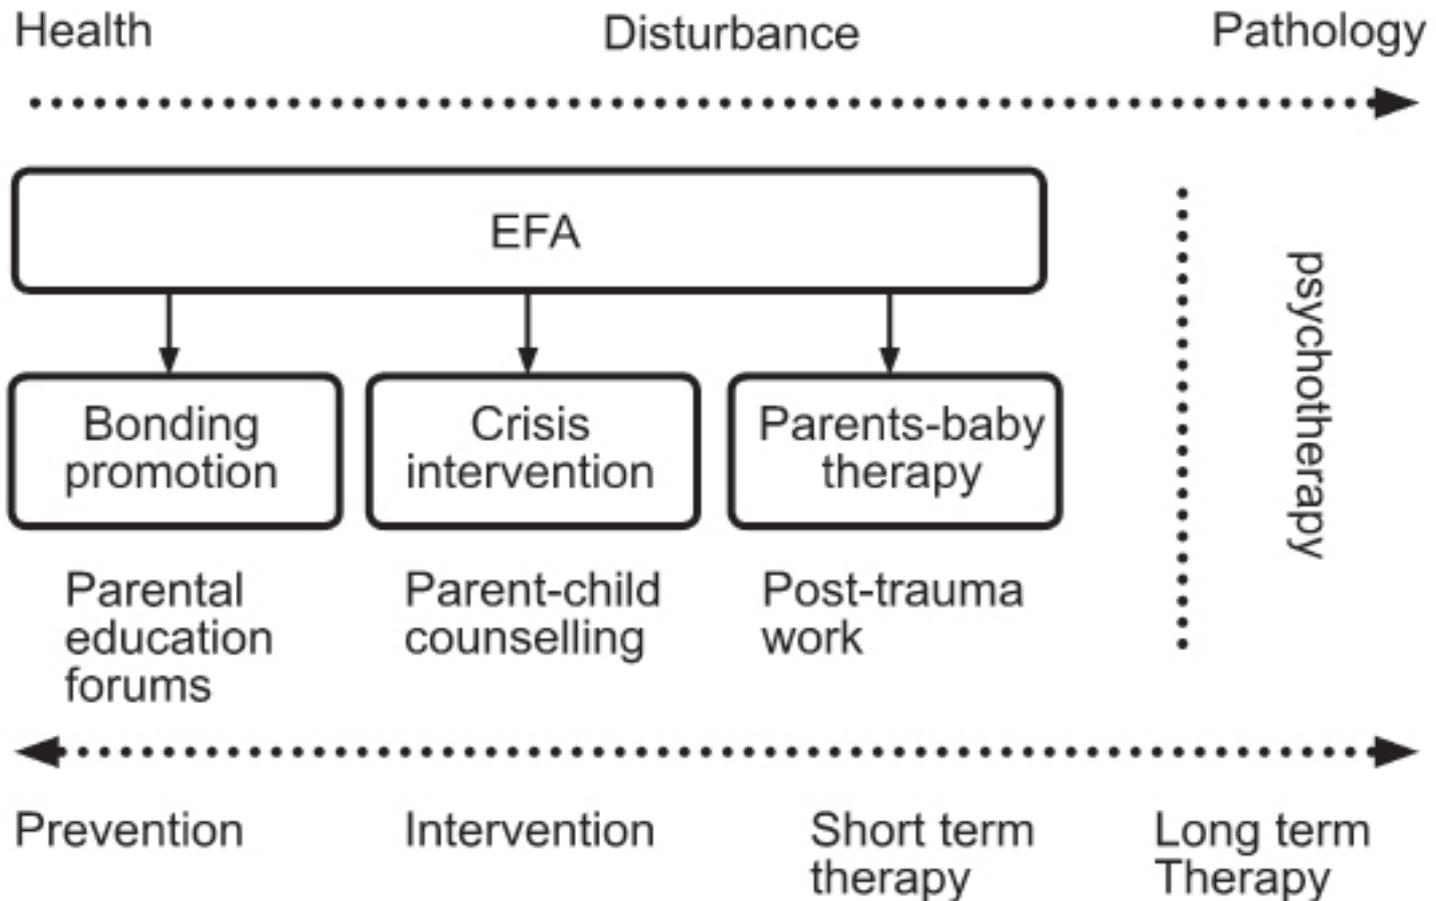

# Program of the Workshop

- **Part I** - Birth, Trauma and Attachment / Birth from Babys Perspective
- **Part II** – Memory Crying and unresolved Birth trauma
- **Part III** – Psychosomatic Aspects of Bonding – Crisis // Selfattachment
- **Part IV** – Emotional First Aid in Bonding Crisis // Bodyoriented Interventions in the Work with Parents and Babys
- Some Video-Examples of EFA - Work

# What is Emotional First Aid?

Emotionelle Erste Hilfe

# Parent-Baby-Therapy

Bodypsychotherapy with  
Adults

Bindungsförderung  
Krisenintervention  
Eltern-Baby-Therapie

EMOTIONELLE ERSTE HILFE

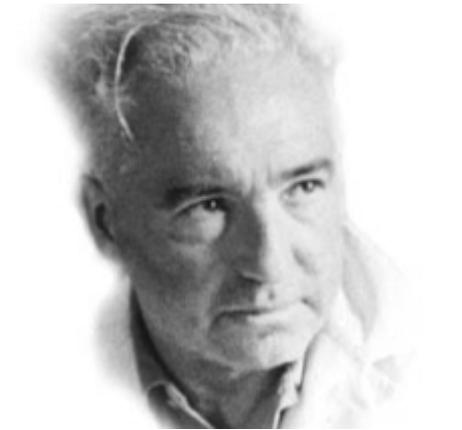

# Bodypsychotherapy

Focus:

- Body as major medium to generate defended emotions; blocked vitality and energy
- Analysis of Body-Structures; Focus and Release of Emotional Expression

Technics:

- Breathing, Touching, Emotional Expression; Body-Reading

## Part I

# Birth, Trauma and Attachment

# Observations within Parent-Baby-Psychotherapies

- Direct Observation of **Selfregualtion (Health)**
- Observation of **Co –Regulating Behaviour of Parents**
- Study of **embodied Attachment-Process/ -Disorders**
- Observation of the interrelationship of **pre- and perinatal traumatization** and Development of Attachment-Relationship
- Observation of **Selfhealing – Process** of the Infant

# The Competent Infant

- Active
- Pro-Social Orientation
- Early Memories

# Mimic Synchronization

# Mimic Synchronization

# Dimensions of Birth Experience

- Birth as Activity
- Birth as Self-Efficacy („Yes, I can!“ “)
- Birth as Ejection – Experience
- Birth as Story of Release
- Birth as relational Process („Teamwork“)
- Birth as bio-energetic Discharge

# Dimensions of Birth

**autonomy**

**attachment**

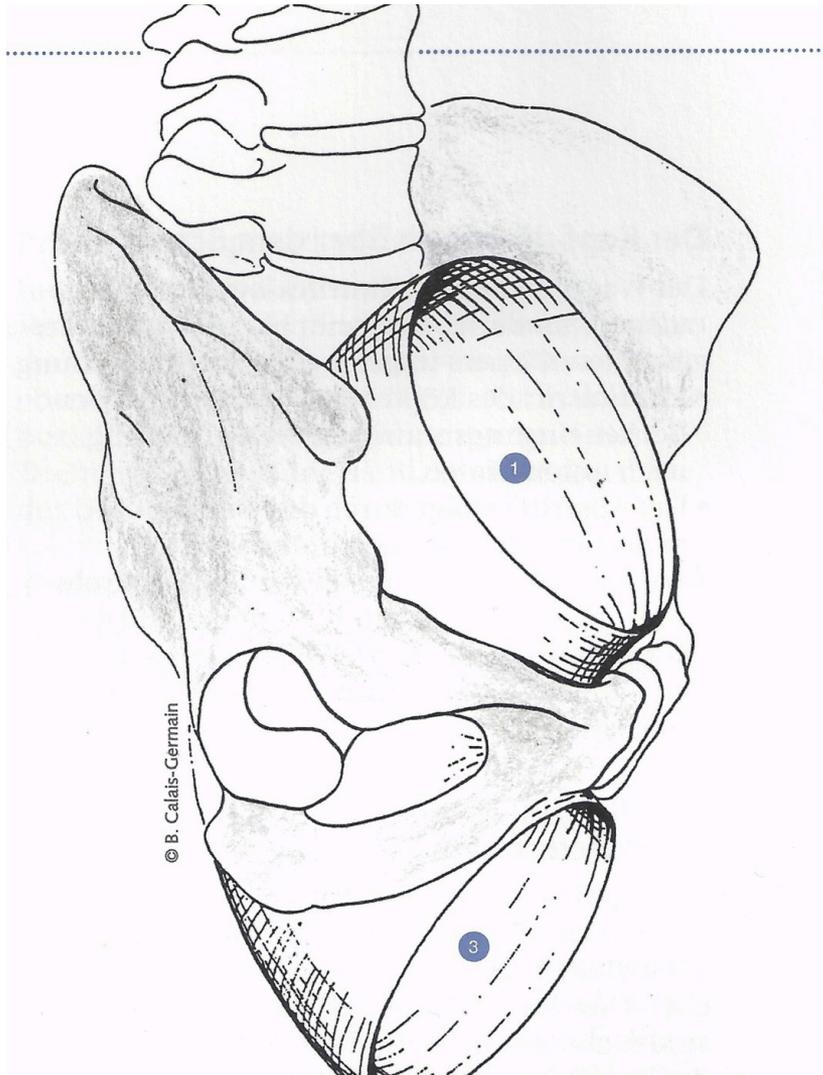

**birth**

**rhythm**

**release**

# Specific Aspects of Human Birth

- Specific Anatomy of Pelvis through upright Positioning
- Relation Cranium – Pelvis needs psycho-somatic Opening
- High Vulnerability

# Perinatal Sources for Stress

1. Loss of own Ryhtm (Speeding up/  
Slowing down)
2. **Loss of Self-Efficacy (through  
Instrumental Interventions)**
3. Loss of embodied Self – Perception  
(Narcosis etc.)
4. **Loss of Attunement (through  
Dissoziation)**

## Sources of Injuries within Birth - Process

- Exhaustion while extended Birth
- **Emergency – C – Section**
- Overwhelming Experience of Pain
- **Loss of Control through Narcosis**
- Perinatal Dissoziation of the Mother

## Bonding - Phase after Birth

- ✓ Extreme **Blutungen**
- ✓ **Längere Trennungen von Mutter und Neugeborenem**
- ✓ **Erstkontakt** mit Baby auf Kinderintensivstation
- ✓ **Invasive nachgeburtliche Interventionen** (z. B. Intubation, ständige Injektionen)
- ✓ **Überwältigung** im Umgang mit exzessiv schreiendem Säugling

# Change within Birth – Experience for Mother and Child

Relaxation/Tension	→	Immobilization
Self-Efficacy	→	Impotence
Closeness	→	Isolation
Protection	→	Invasion
Orientation	→	Loss of Orientation

# Aspects of Baby-Bodylanguage

- Body – Positioning
- Patterns of Movement  
(Pushing of Legs, jerky Movement of the head etc.)
- Change of Skin colour
- Whining / Extreme Baby-Crying

# Trauma-Symptoms of the Baby

- Trauma – Crying
- Hypervigilance
- Avoiding of Eye – Contact
- Contraction/ Opisthotonus

# Trauma-Symptoms – Baby - II

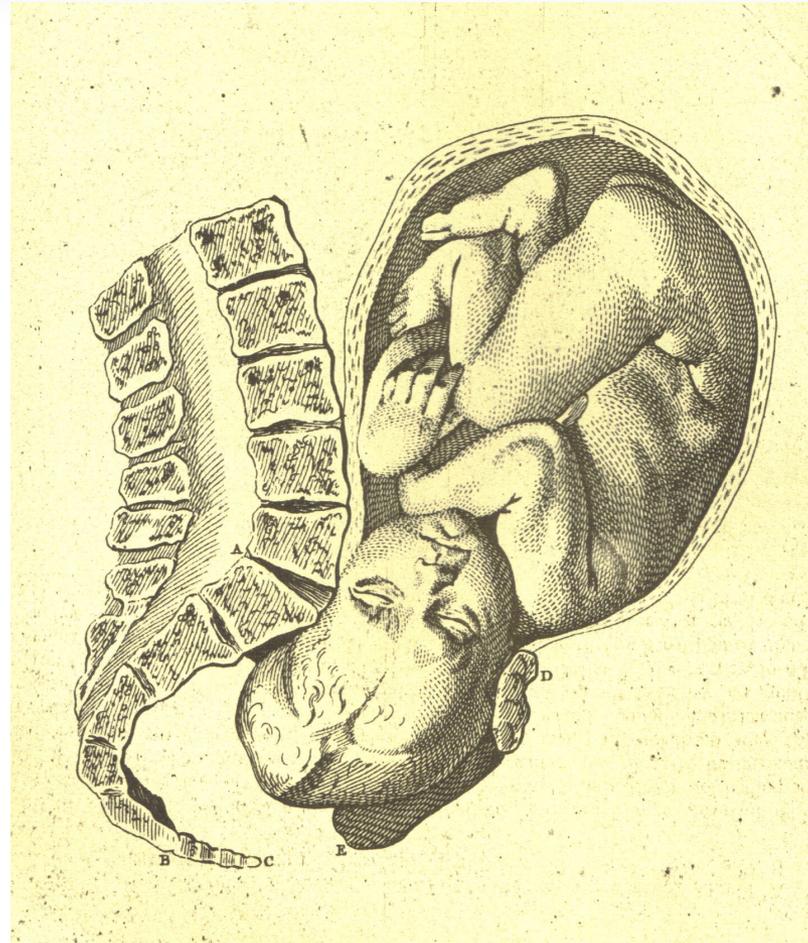

- Loss of Interest in Enviroment
- Go Silent
- Decrease of emotional Expressiveness
- Lack/ Loss of smiling

# Trauma-Symptoms - Baby - III

- Extreme Excitability
- Jumpiness/ Moro-Reflex

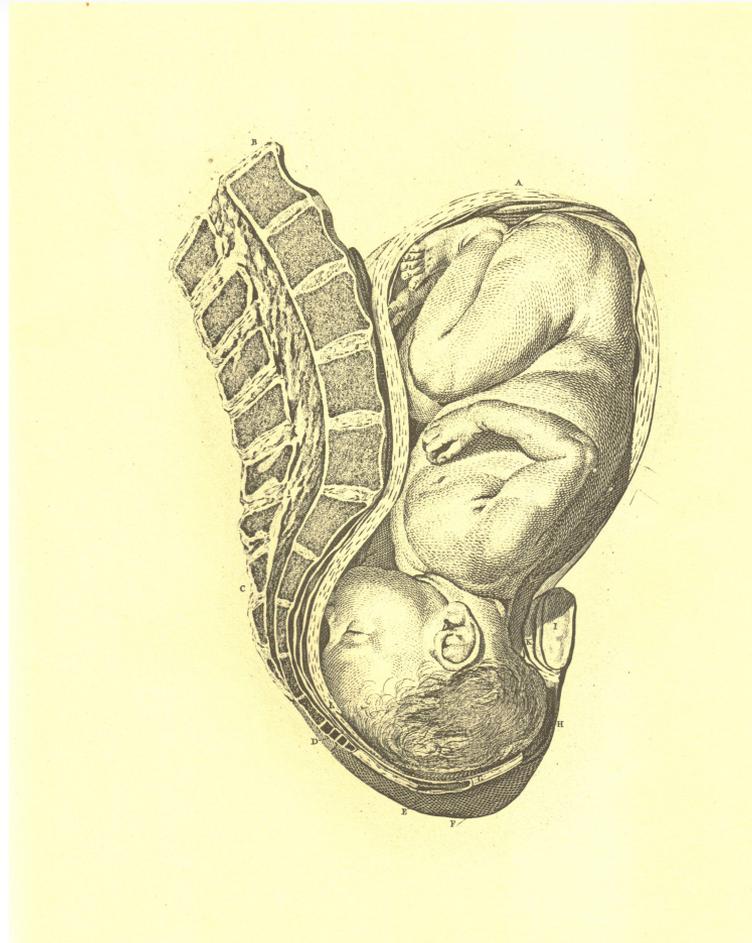

# Birth – Stage I – Pelvic Inlet

# Birth Stage II - Mid - Pelvis

# Birth – Stage III – Pelvic Outlet

# Birth – Stage IV - Arrival

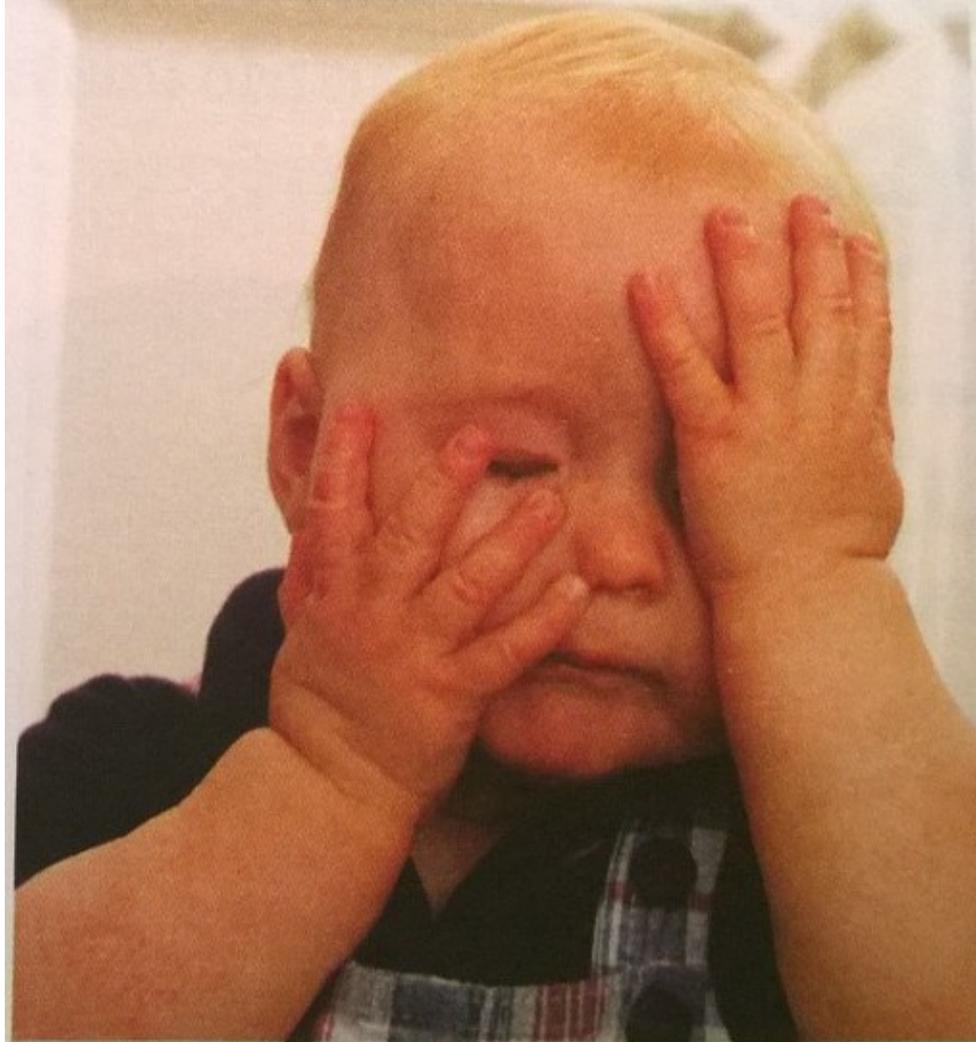

# Aspects of Baby-Bodylanguage

- Body – Positioning
- Patterns of Movement  
(Pushing of Legs, jerky Movement of the head etc.)
- Change of Skin colour
- Whining / Extreme Baby-Crying

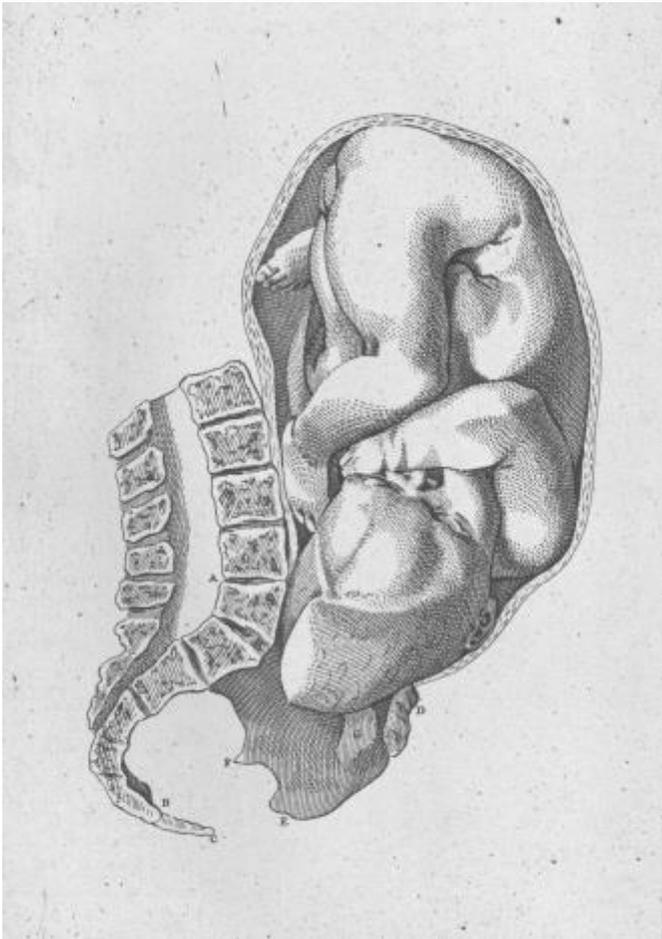

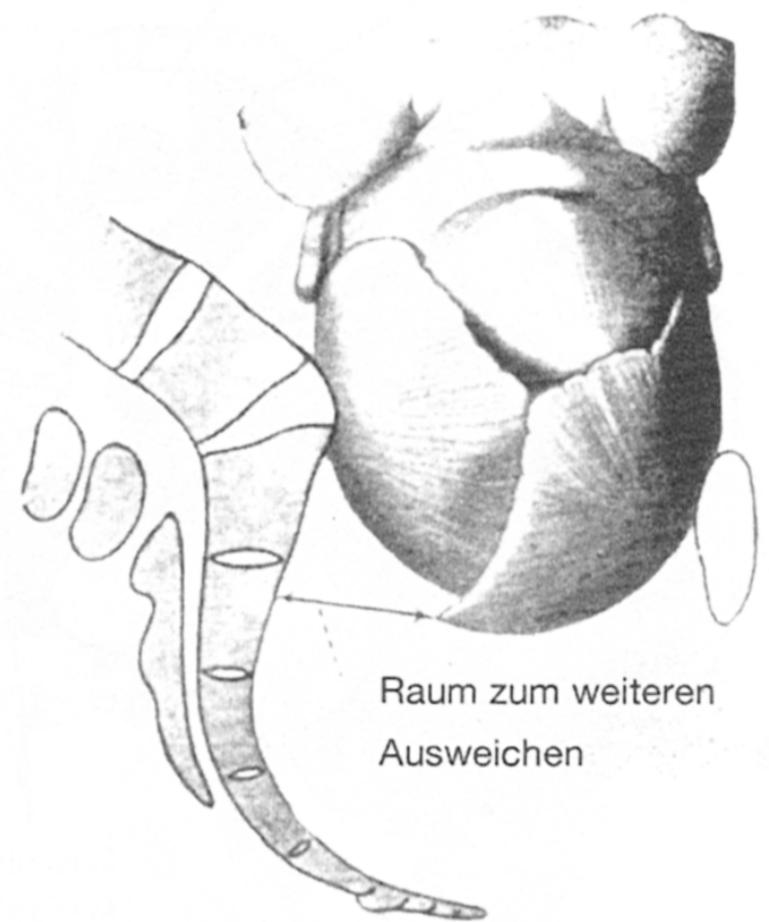

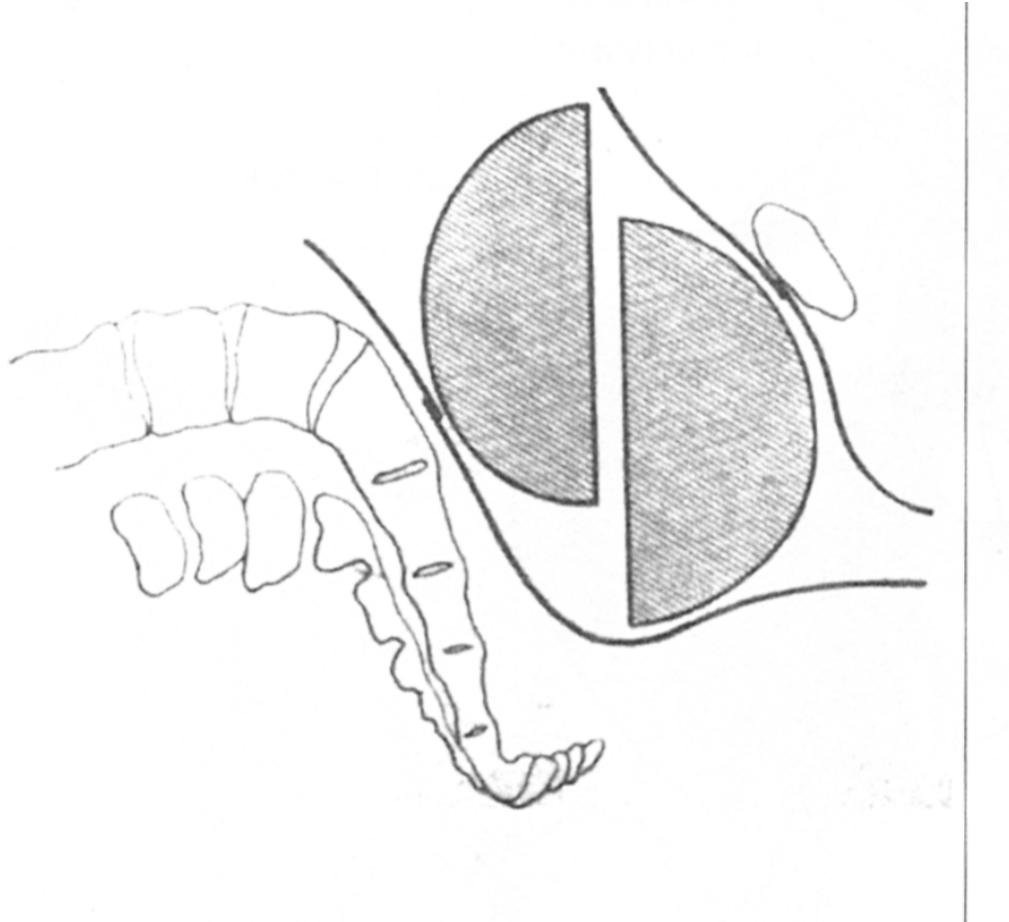

# Pressure – Dynamics in Phase 1

- Pressure through **Lumbo-Sacral Promotorium** und Pubic Bone
- Pressure effects an **Compression** of Skull
- Cranial Bones can move

# Example 1 - Birth Dynamics – Lie - Side

# Birth Phase I – Baby – Bodylanguage

- Indentation on the sides of the head
- High Energy-Level in the upper Part of the head
- At the Lie-Side the Eye appears smaller and moved to the midline

# Movement Patterns – Phase 1

- Baby hits with arms/ hands on points of the head where the pressure within Birth took place.
- Baby searches with the head for contact („rubbing the head on the wall“)

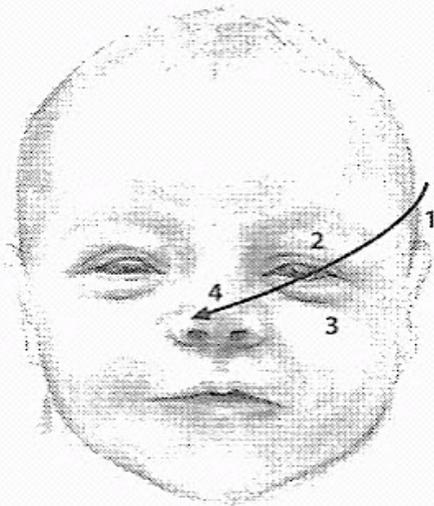

# Example 2 – Birth Dynamics - Rotation

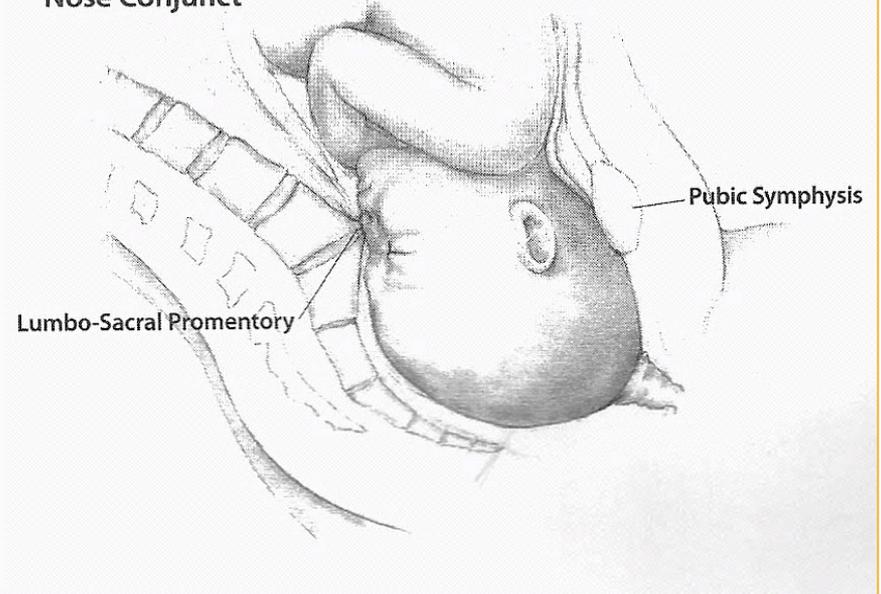

Left-sided Lie  
Conjunct Pathway

1. Temple
2. Orbit
3. Malar/cheek
4. Nose

Nose Conjunct

Quelle: Terry, 2014

# Movement Patterns – Phase 2

- Following with Hand und Finger the Conjunct Pathway of the Rotation
- Extreme and repeated Rubbing of Eyes
- Zick-Zacking – Movement

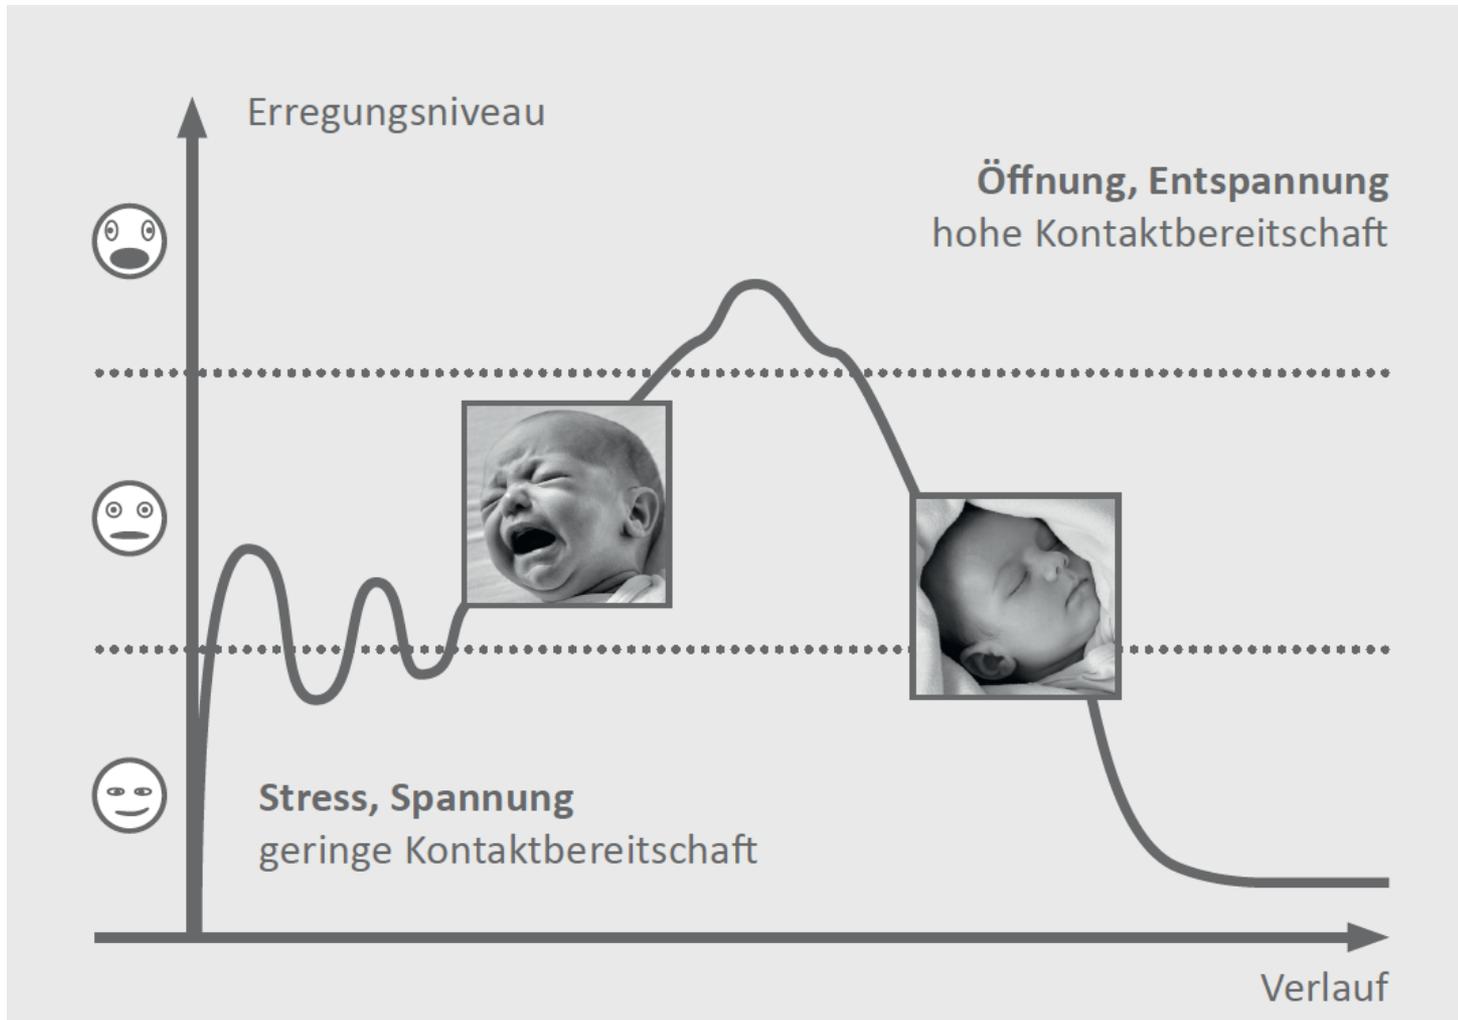

## Part II

### Types of Baby - Crying

# Dimensions of Baby – Crying

# Baby- Crying and Stress - Release

## Crying and Stress – Release

- ✓ **Slow Start** of the Crying Process
- ✓ **Infant stays in Eye Contact** while Crying
- ✓ **Whole Body Movement** withing Crying Process
- ✓ **Relaxation** after the Crying
- ✓ **Inner Reaction:** Releave/ Warmth/ Attraction

Bindungsfeld  
 Toleranzbereich

- 4 Autonomie
- 3 Stimulation
- 2 Sicherheit
- 1 Körper

# The Still Face - Experiment

# Three Forms of Reaction

- TYP A - Pro-social Coping – Strategy
- TYP B – Mobilization – Phase (Crying/ Distress)
- TYP C – Immobilizations – Phase (Resignation/ Freezing - in)

# Types of Baby - Crying

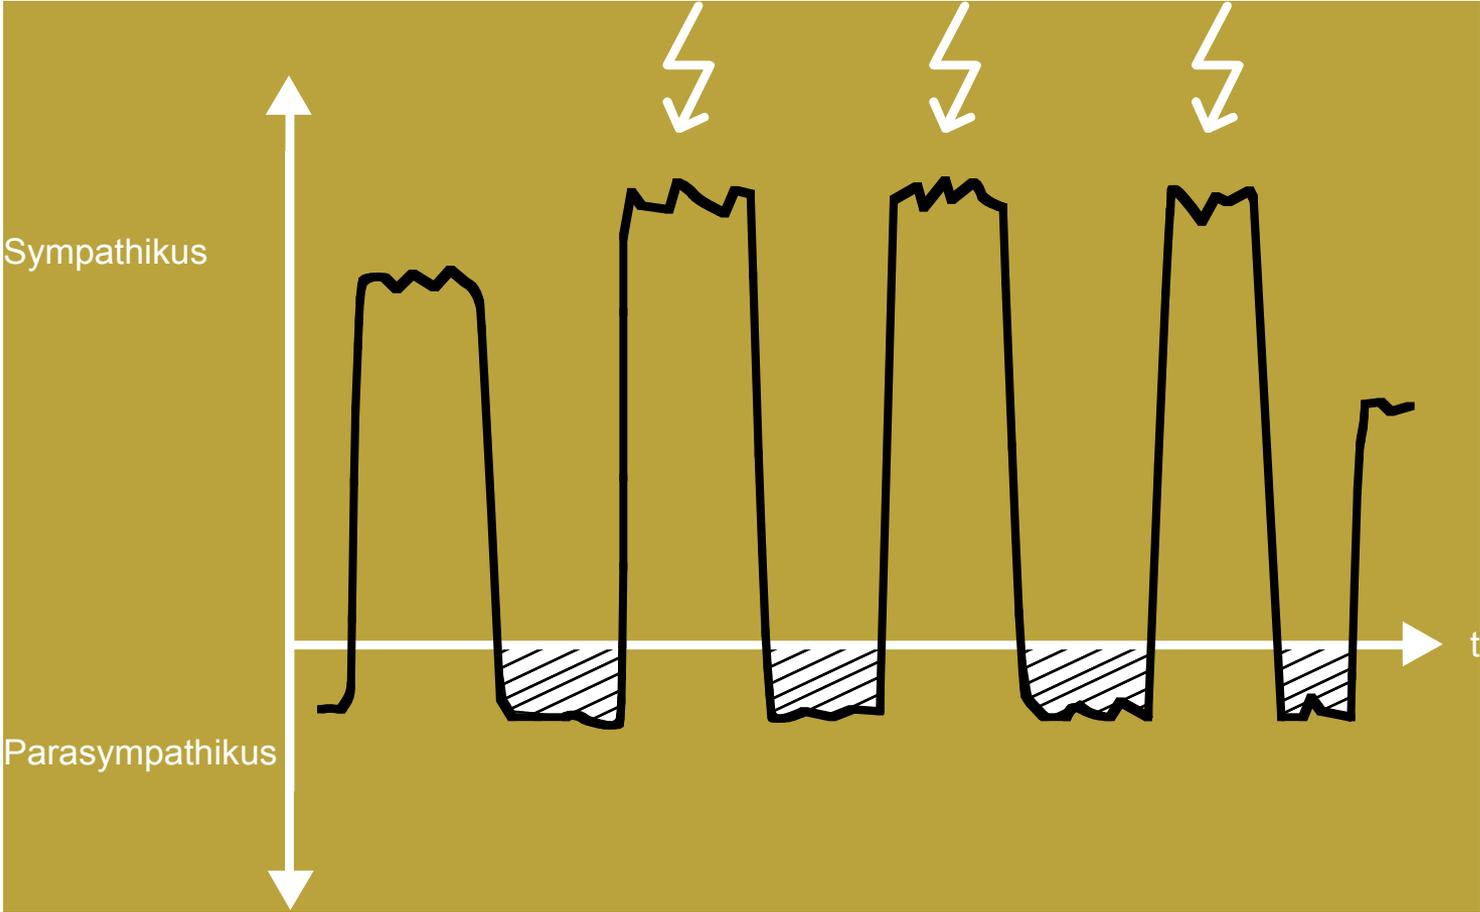

→ Bedürfnisweinen

→ Erinnerungsweinen

→ Resonanzweinen

# Rythm of Disregulated Crying

# Crying and Body – Memory – Example 1

# 4 Month old Baby after C - Section and postnatal Separation

- Sticking of Birth Process after 24 – hour period of Contractions and fully opened Cervix
- Pathological CTG
- Full Anesthesia with Emergency-Cesarian-Birth
- Artificial Respiration and „Deep Cooling“ of Conrad because of threatening brain damage
- Immediate Separation after Birth and Intensive Care

# Symptoms of Mother and Child

- Excessive, longterm Crying Periods of Conrad
- High frequent Awakening in the Night; light and very short sleeping periods
- Extreme feelings of self-doubt, self- devaluation and feelings to fail as a mother
- Feelings of Alienation in Contact with Conrad
- Arching of the back; Hypertonus of Diaphragm

## Break for Lunch

## Part III

### Ways out of the Crisis

# Why do Parents and Parents come into Crisis - Intervention?

- Emotional Disregulation
- Loss of Orientation
- Lack of Bonding
- Need for Guidance

# Challenge of Working with Excessive Cry-Baby-Syndrome

- Activation of Helplessness and Impotence in the Counselor
- High Expectations of the Parents (Pressure)
- Danger of Professional Agency
- Dissociation within Explosive Crying Process

# First Impressions within Acute Crisis

# Phenomenology of weakened Attachment

<b>Function</b>	<b>Phenomena</b>
Muscular System	Peripheral Muscel Tension
Sensory Channels	Closed/ Intake weak
Arrousal	Activation/ Speeding up
Attention	Decentering
Breathing	Chest-Breathing/ flattened
Affect	Unsecurity/ Fear
Attachment Experience	Alienation
Cognition	Desorientation
Autonomic Nervous System (ANS)	Dominance of Sympathetic NS

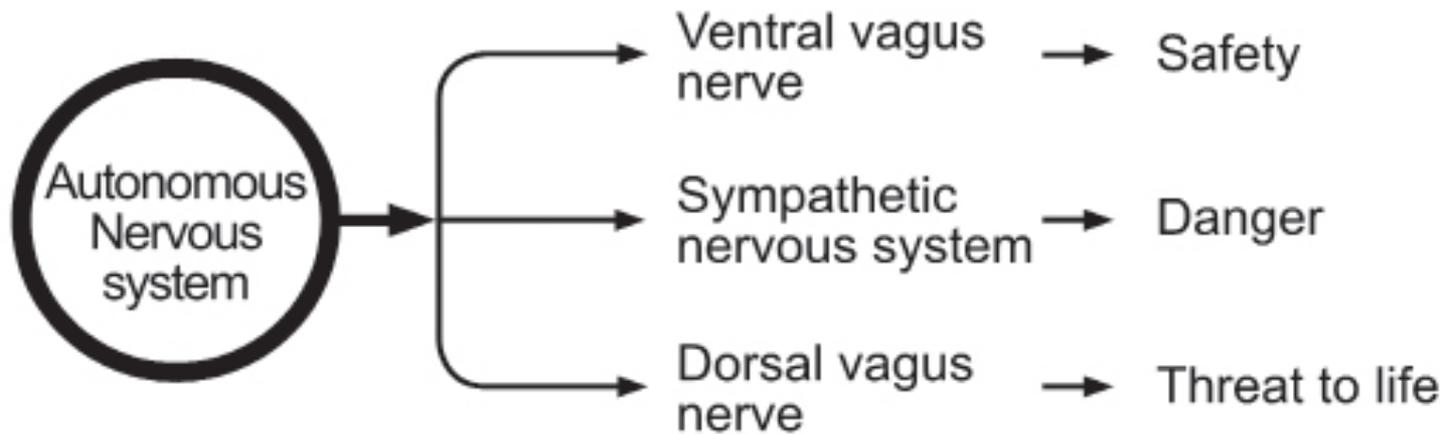

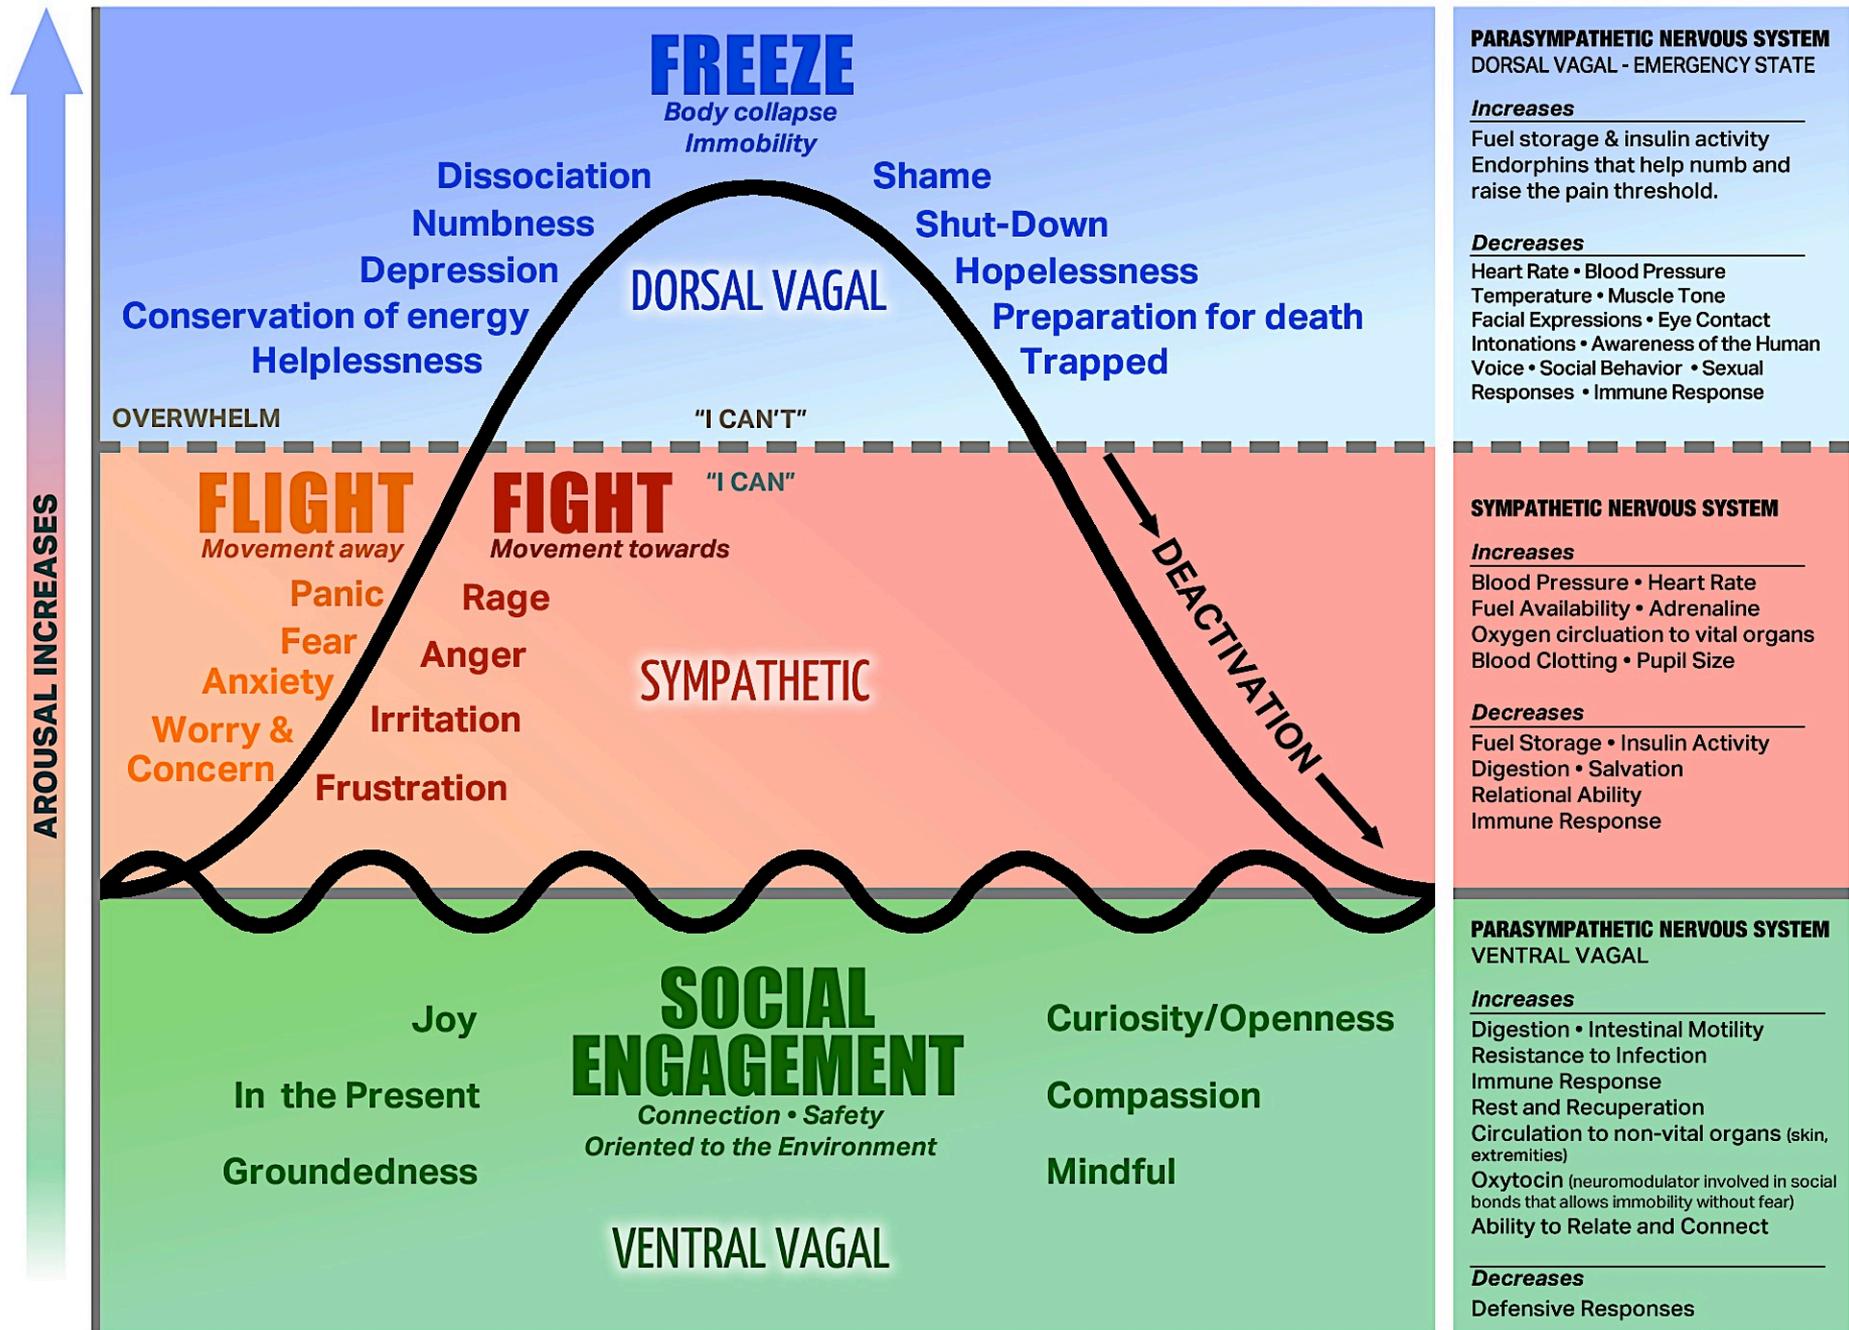

## Polyvagal Theory by Dr. Stephen Porges (USA)

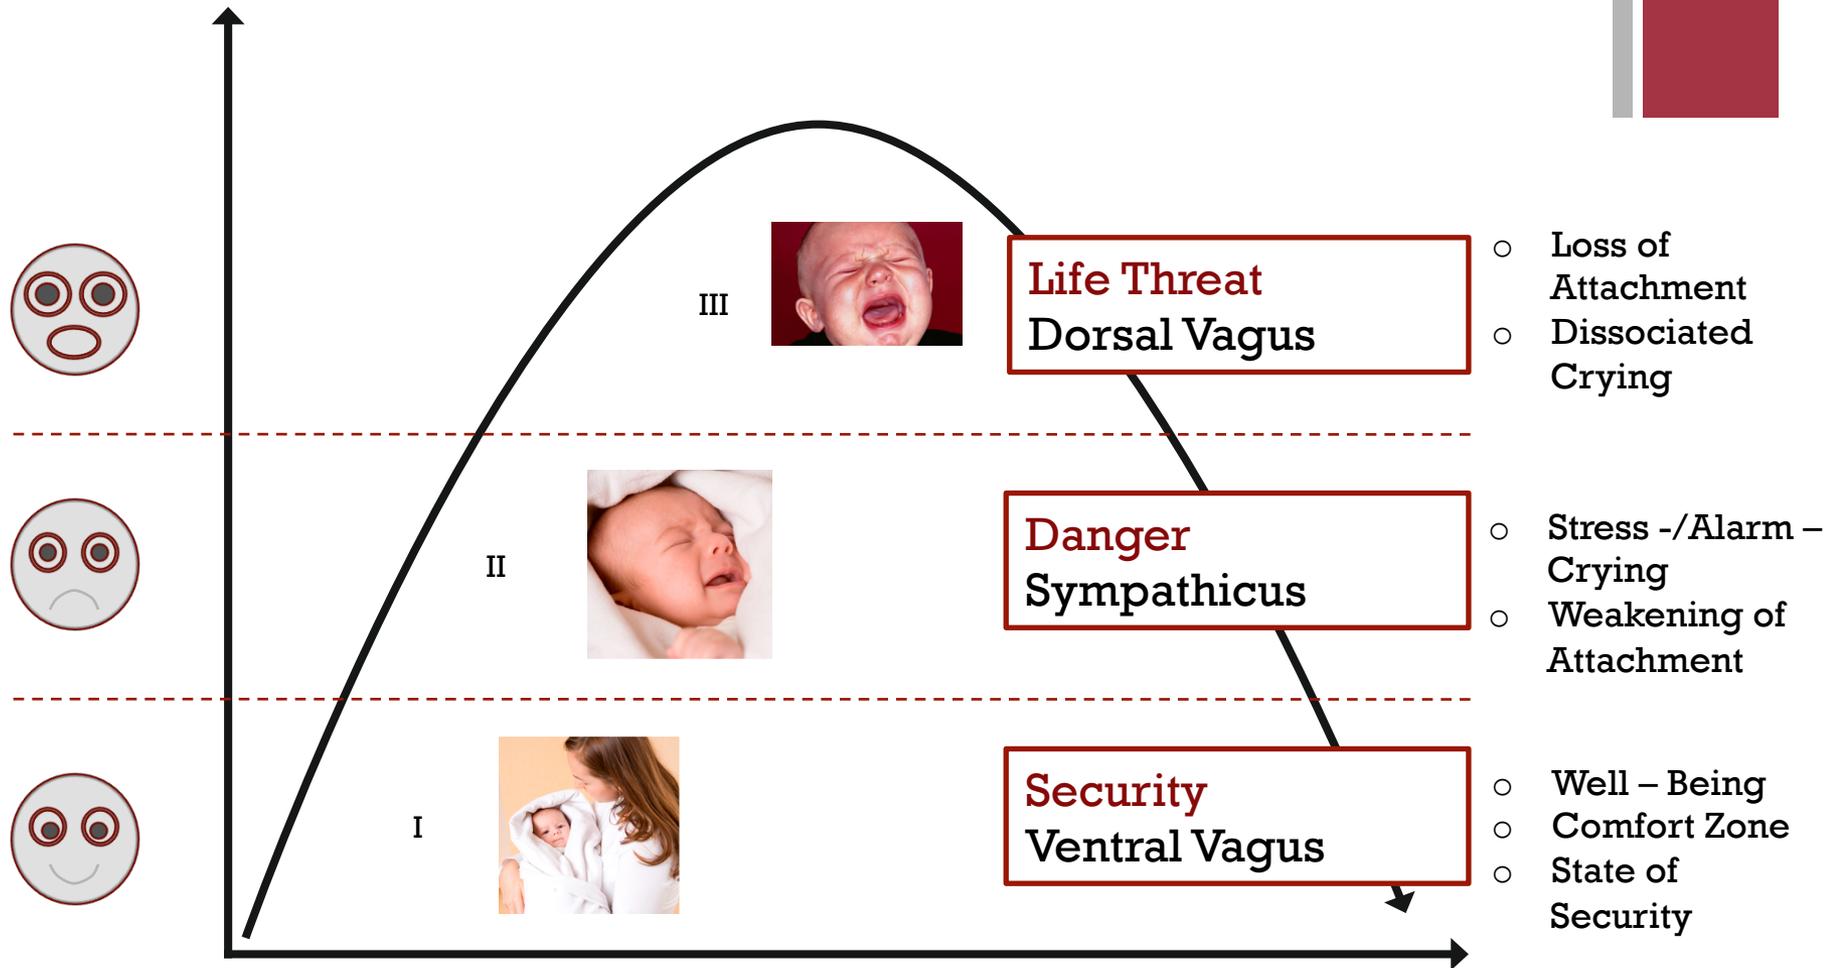

- Triune of Autonomous Nervoussystem (ANS)
- Hierarchy of Regulation Systems in the ANS
  - Safety
  - Danger
  - Life Threat

# Polyvagal Perspective of the ANS

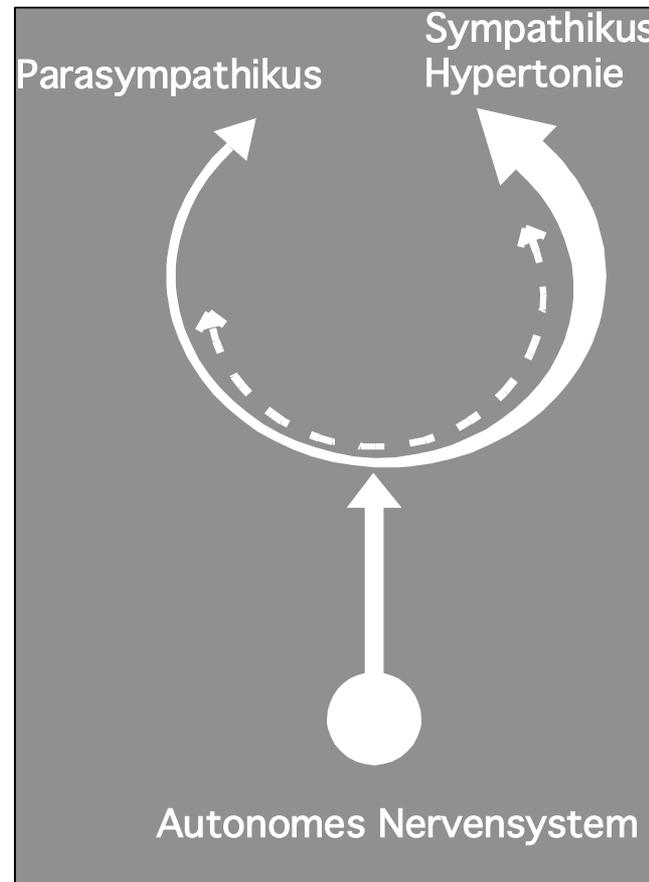

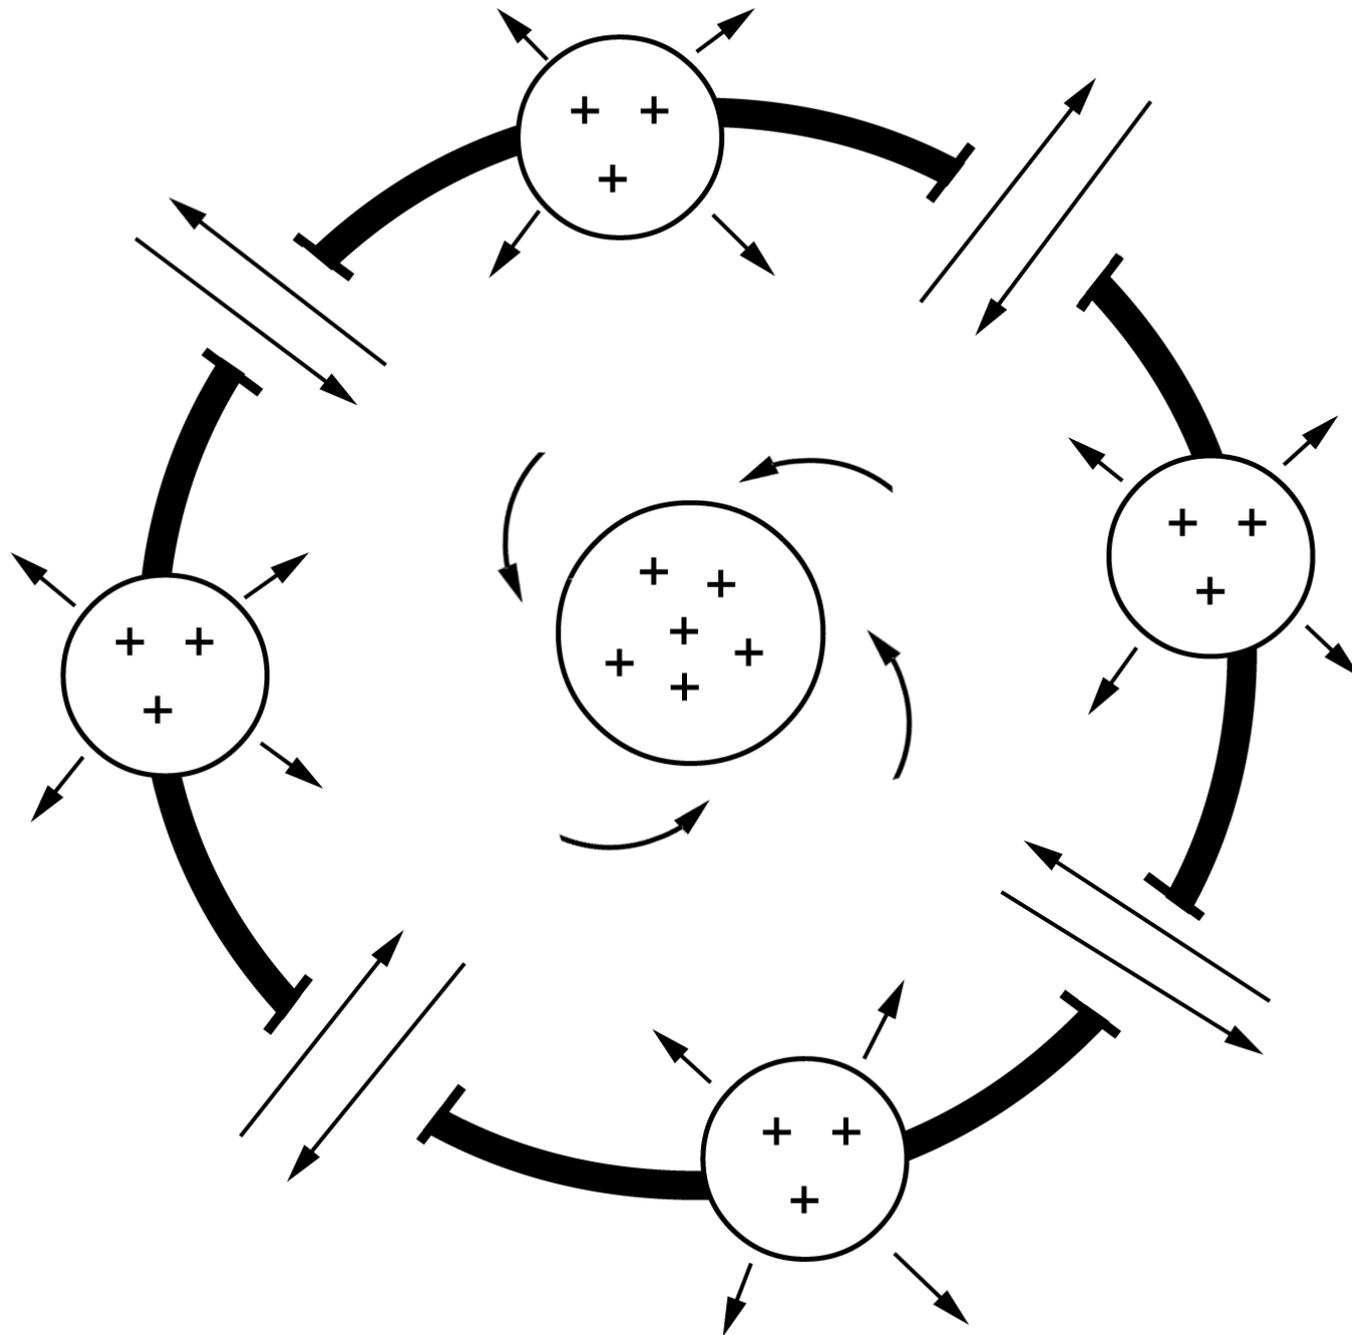

# Stress-Levels within Crying-Process

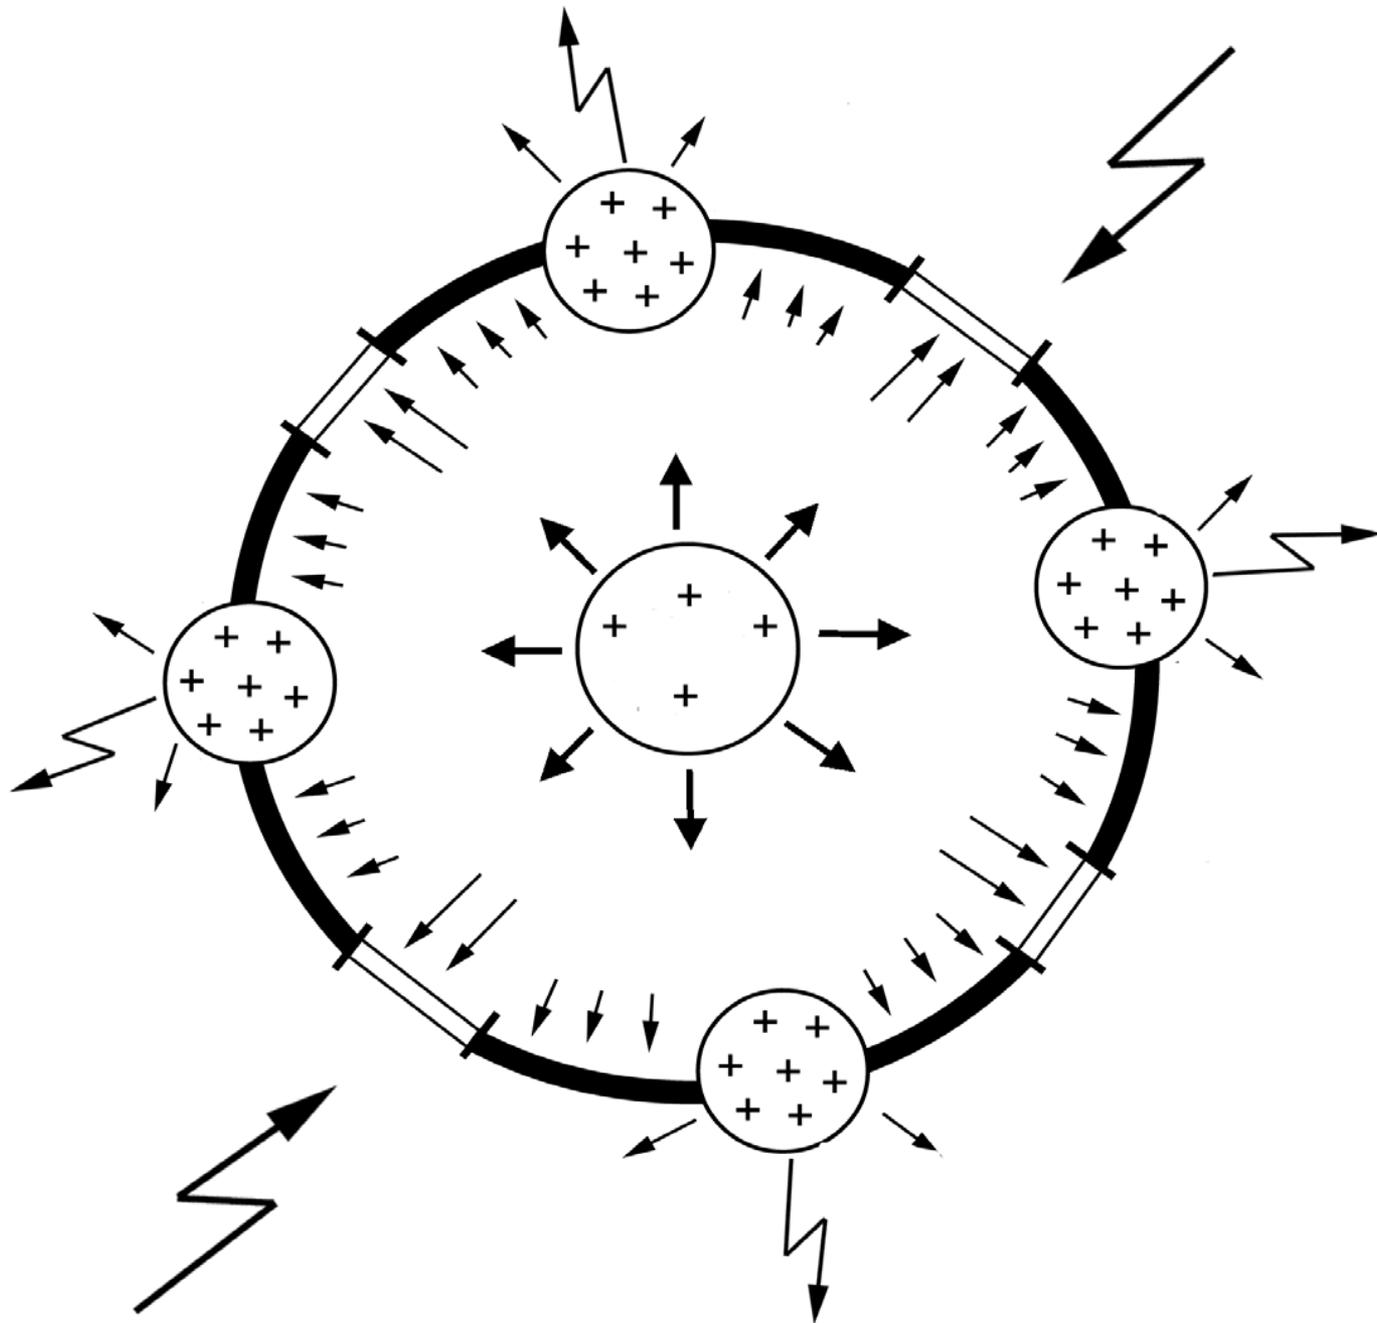

# Parents in the State of Stress

State of Inspiration  
Baby-Centred  
Hypervigilance  
Helplessness  
Sleeping Disorders  
Restless Thinking

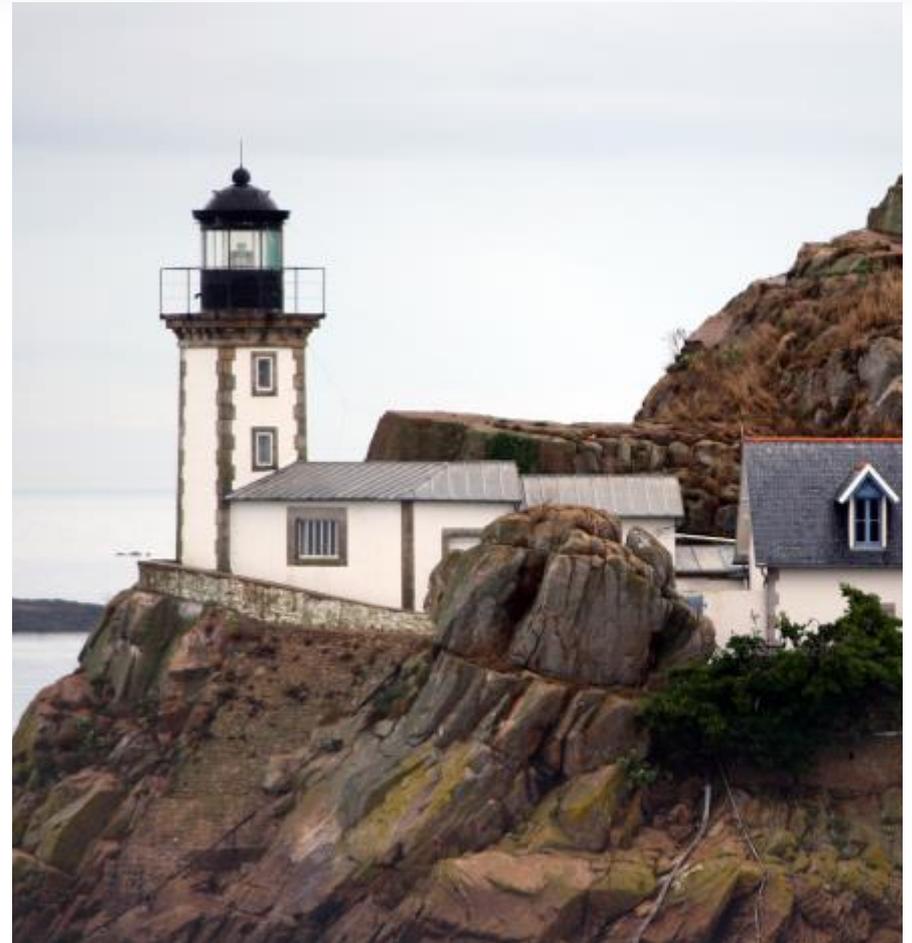

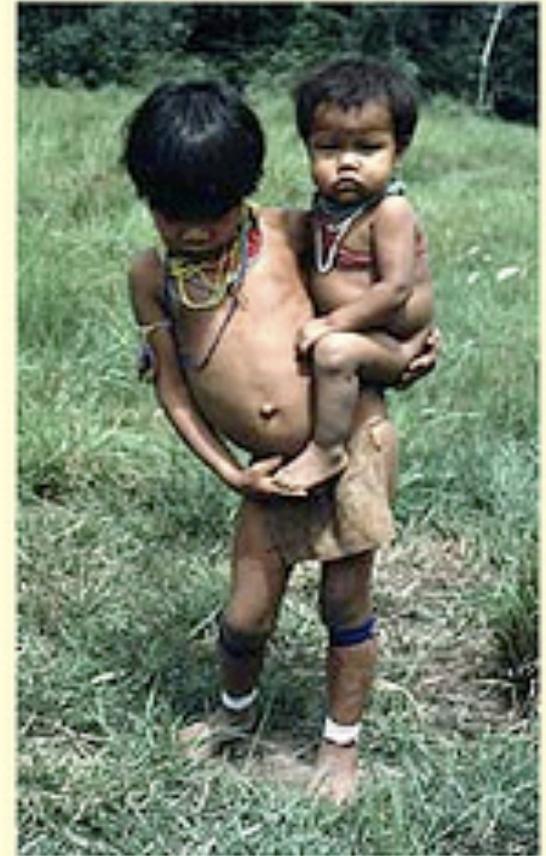

# Self – Attachment and Co-Regulation

- Secure Co-Regulator
- Creating of „Attracting – Force“
- „Lighthouse – Principle“

# Learning from Traditional Cultures

# Self – Attachment through Breathing

# Body-oriented Interventions

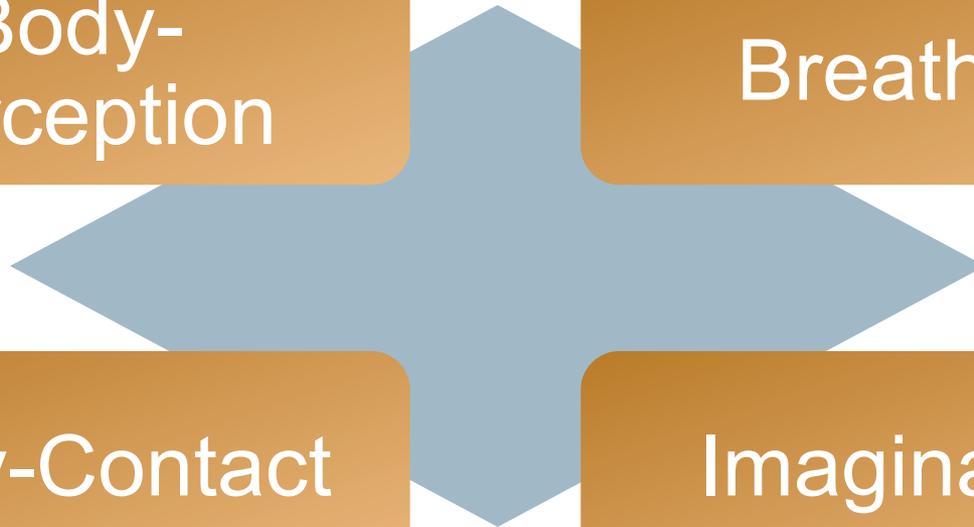

Body-  
Perception

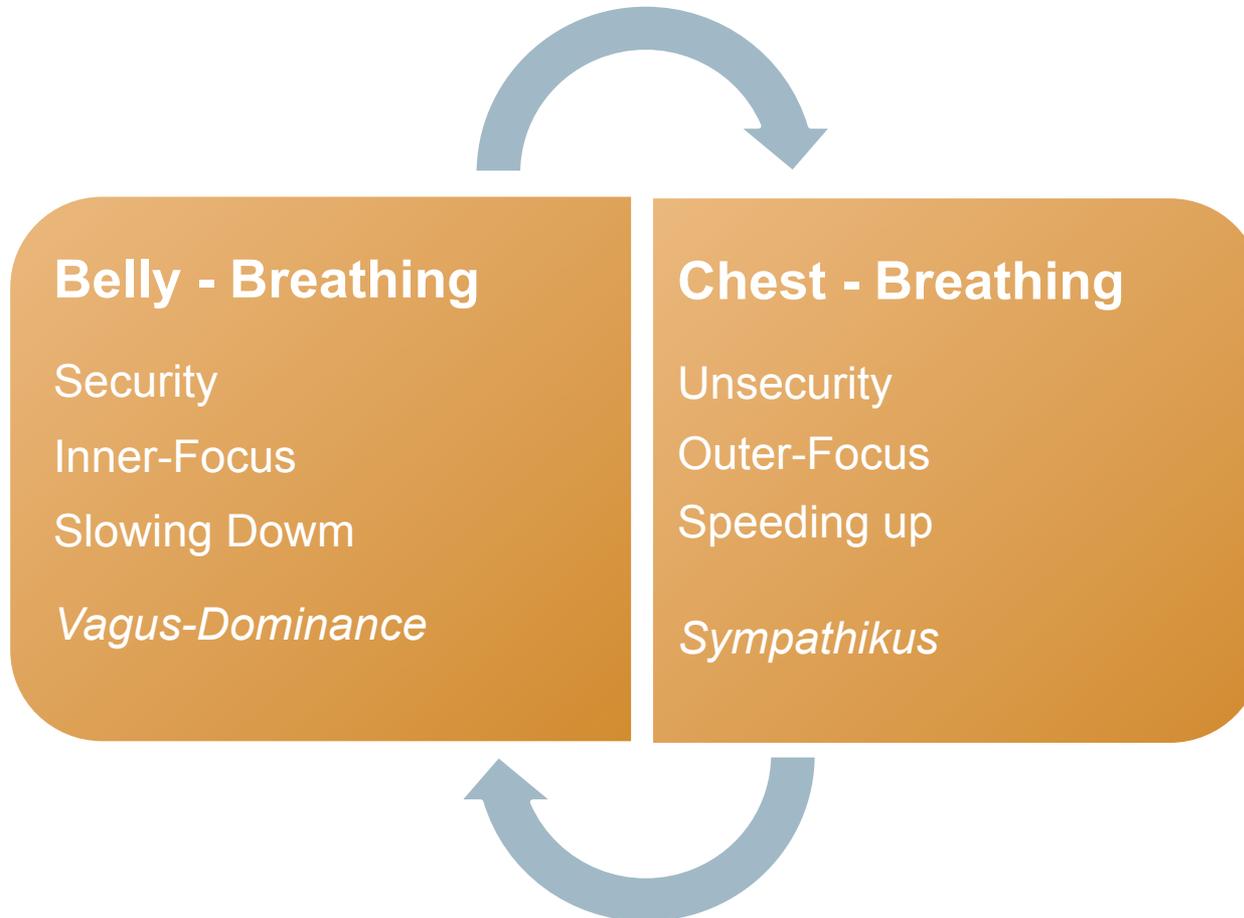

Breathing

Body-Contact

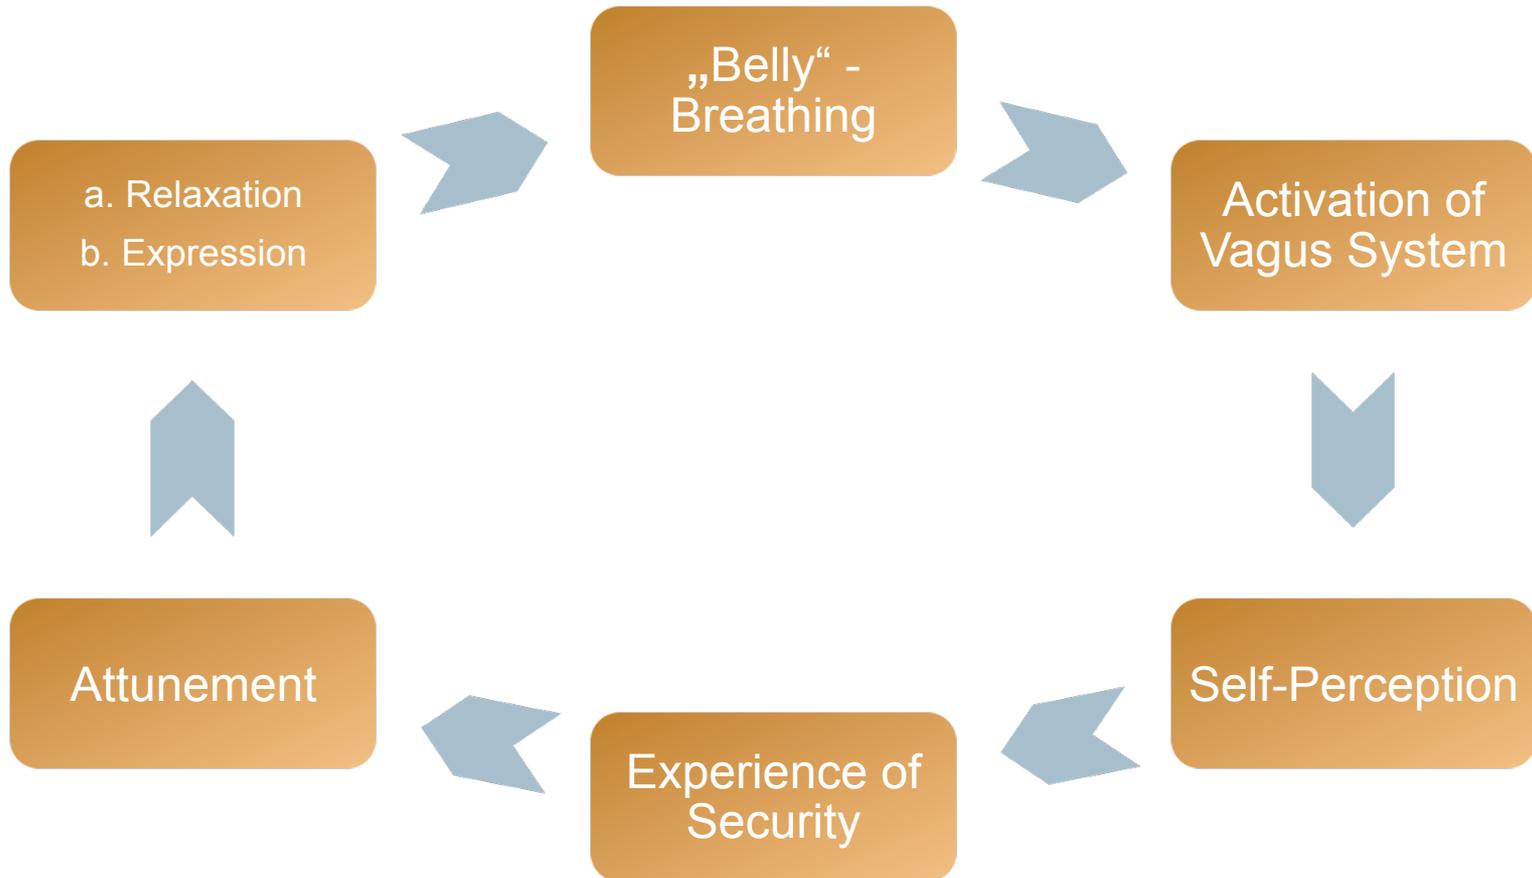

Imagination

# Types of Breathing

# Circle of Contagious Health

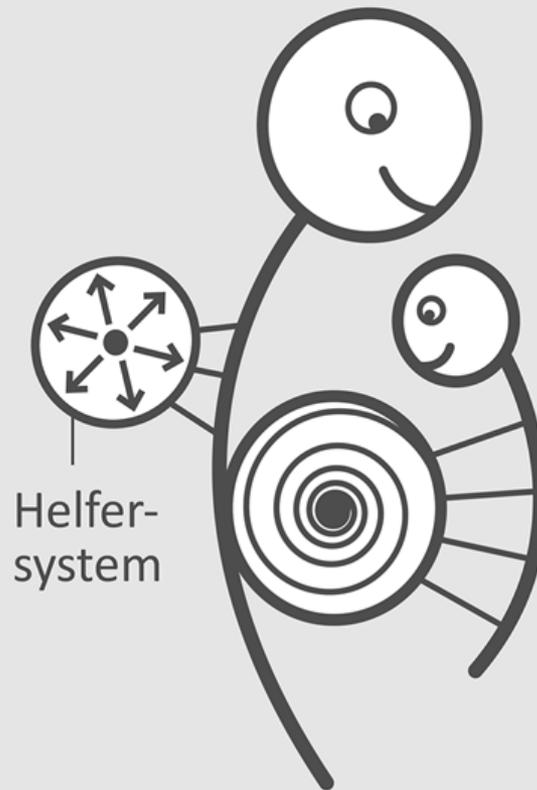

# Use of Body – Contact in EFA

- „Mothering the Mother/ Father“
- Co – Regulating the Co-Regulator
- Early Warning System

# Principle of the Secure Base – Bodycontact

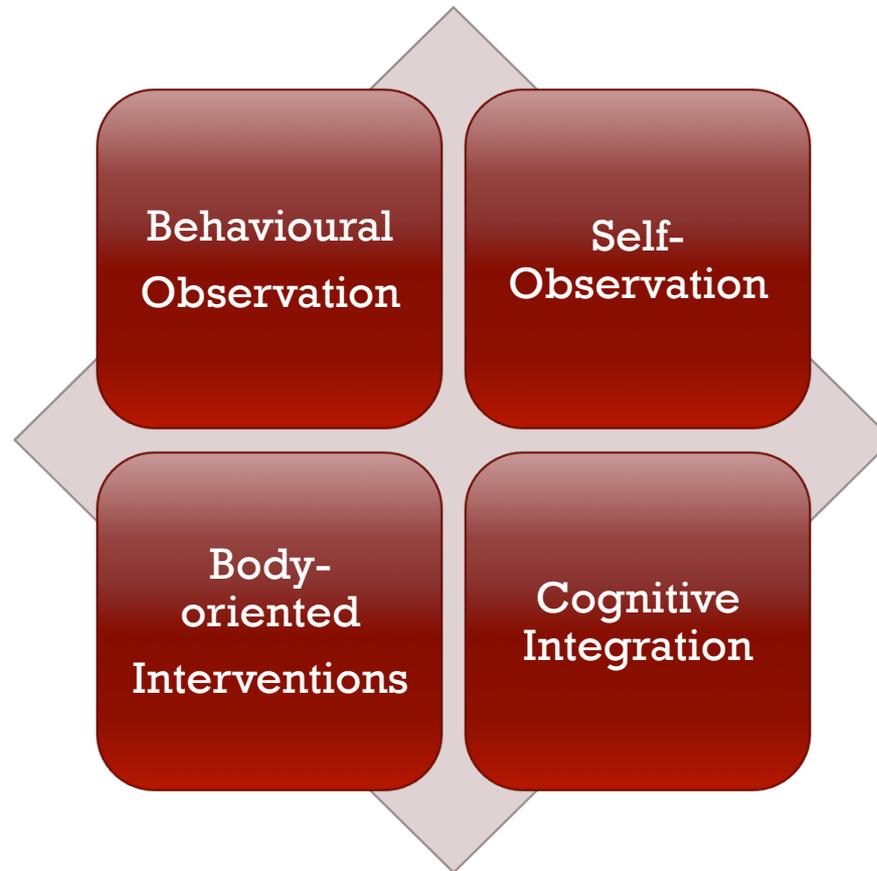

## Part III

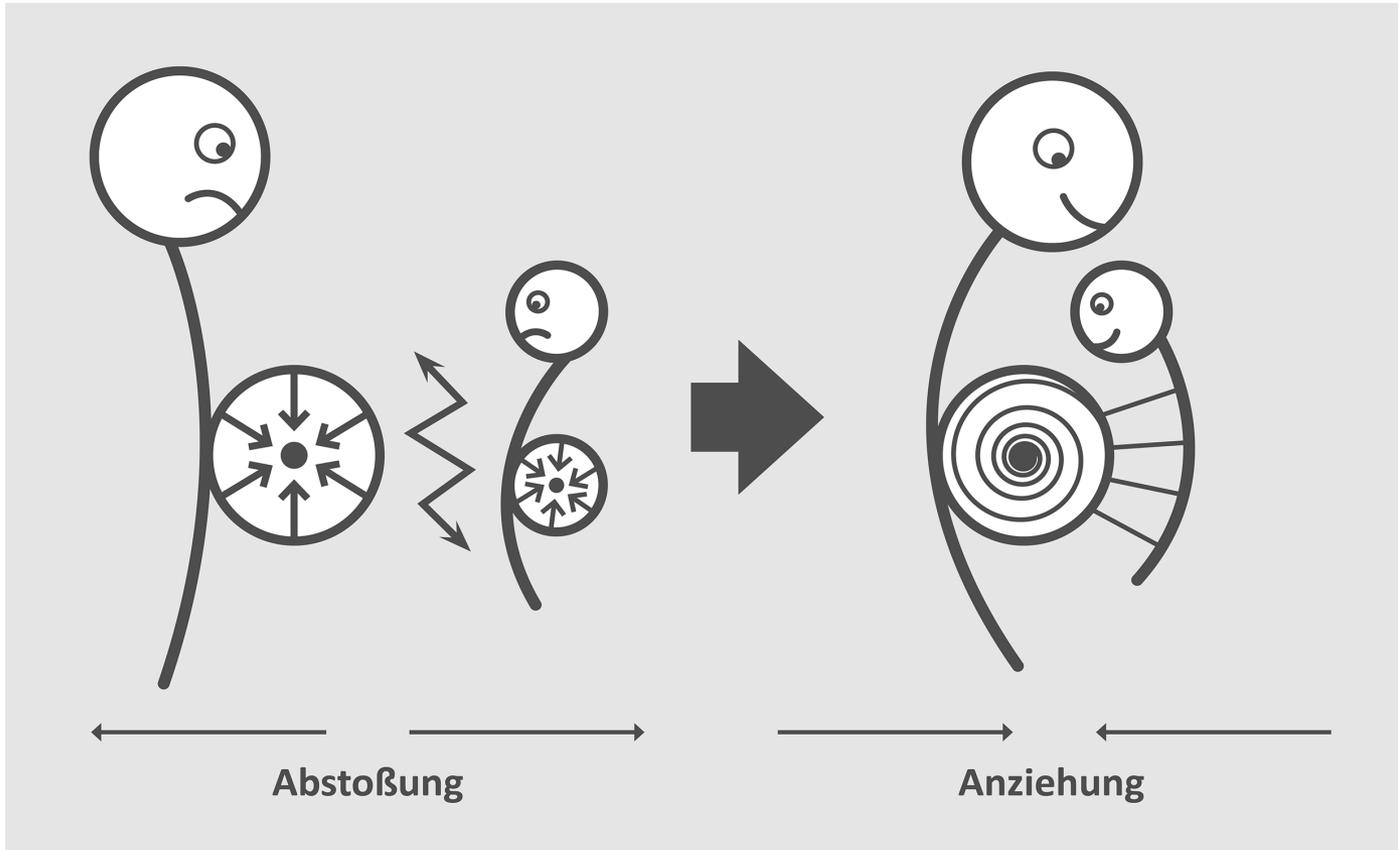

### Tools of Emotional First Aid

# Elements of Emotional First Aid

# Contagious Health through Self-Attachment

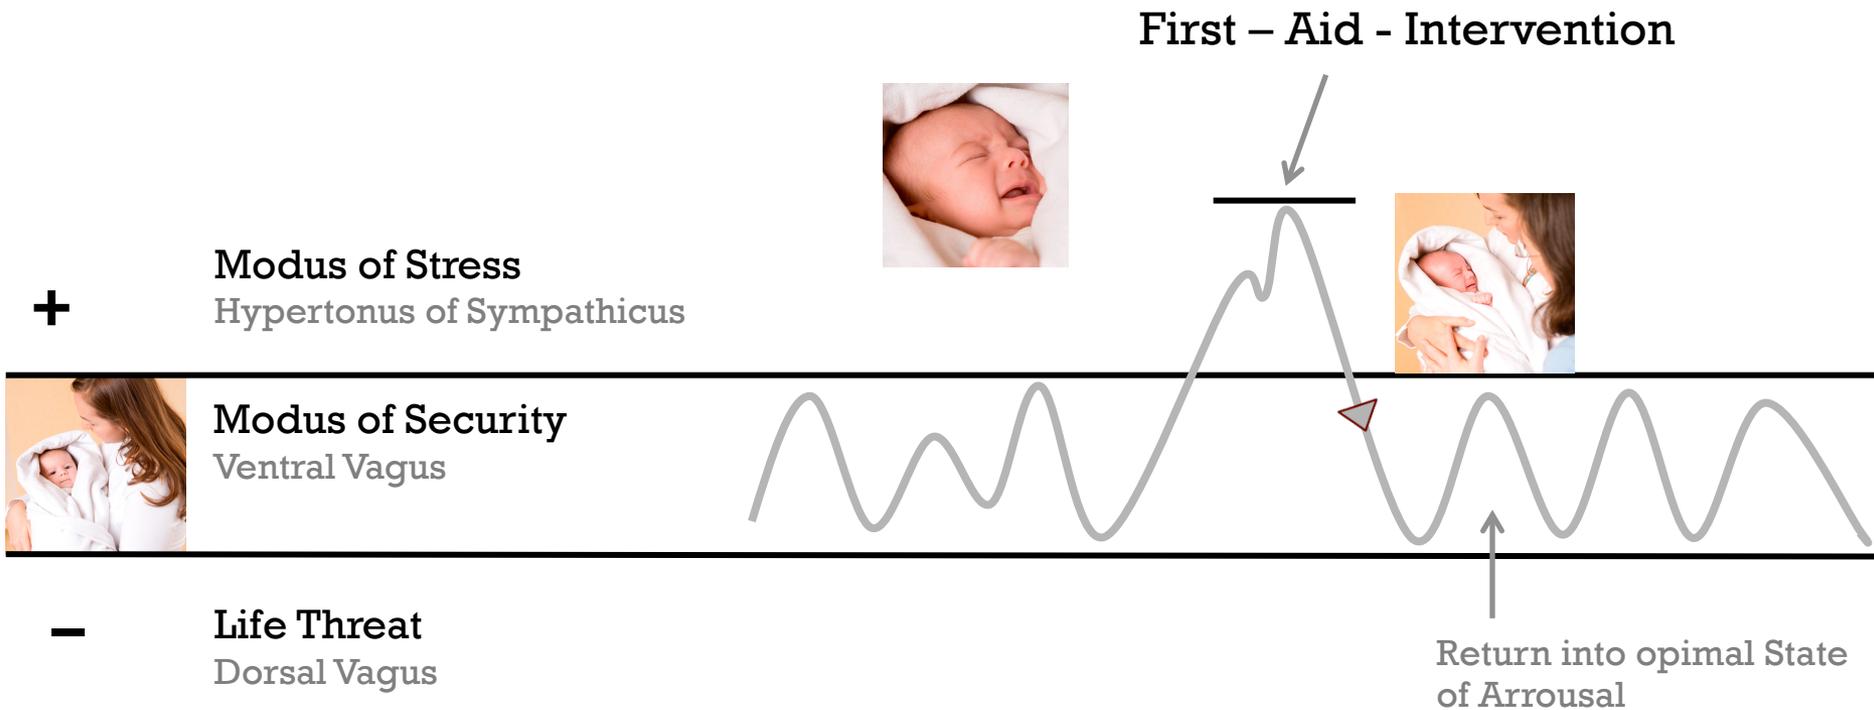

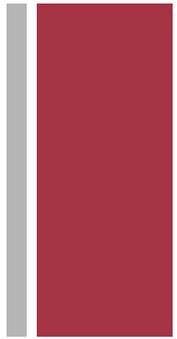

## Phase I: Behavioural Exploration

- **Behavioural Observation of Parents and Infant**
- **Exploring the Contactlessness:** Marking the Start where Loss of Attunement begins („here it get´s too much“)
- **Acknowledging the parental Strategies** to overcome thr „problematic“ Behaviour of the chld

## Phase II: Inner Observation

1. **Exploring the Body Sensations** in the State of **Stress** (for example meanwhile the crying process of the Infant)
2. **Location of Somatic Markers:** Where can the Tension be felt? Where in the body does it get narrow? Where does the client experience the increase of the excitation?
3. **Realization of the Affect:** What feels the Mother when the Baby arches its back or avoids the eye contact?

# Parental Sensitiveness and optimal Windows of Tolerance

*Grafik nach Besser/Odgen/Harms*

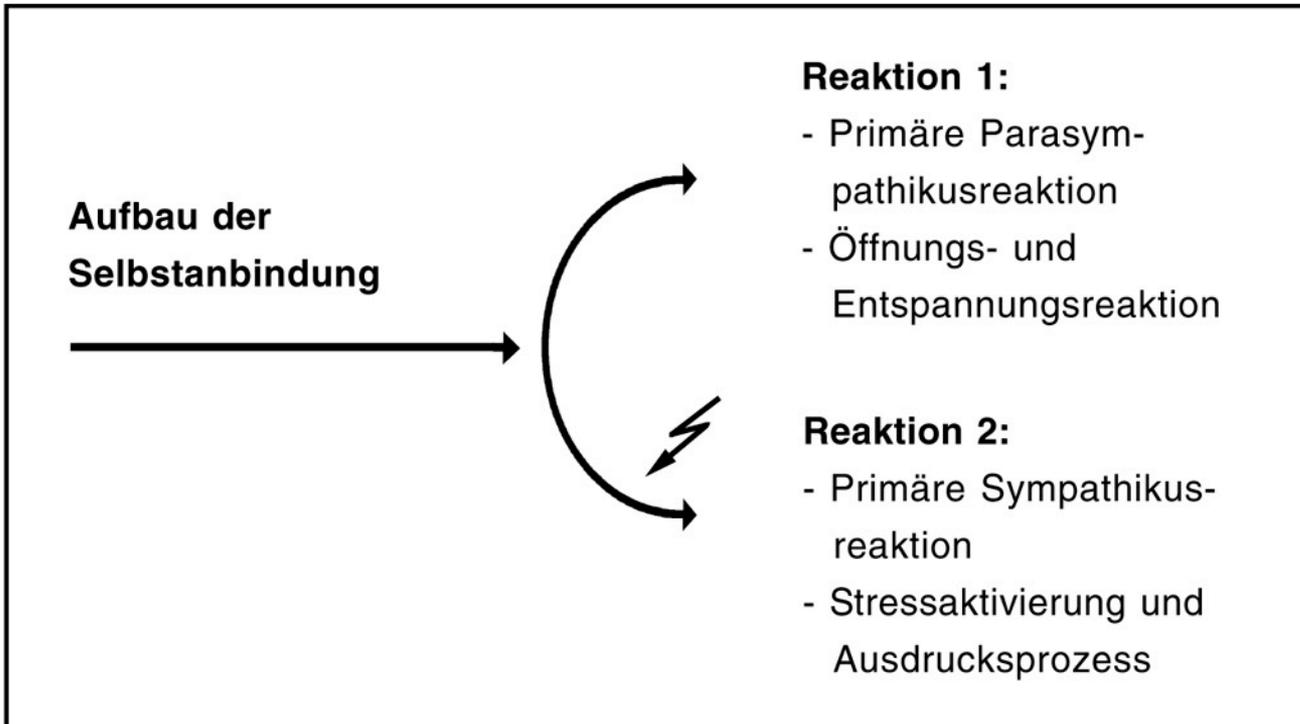

# Perspectives of Breathing – Interventions within EFA

- Breathing as **diagnostic Tool**
- Breathing as **Modulator** of the Autonomous Nervous System
- Breathing as **Way to Slow Down**
- Breathing as **Support of inner Security**
- Breathing as **Early Warning System**

# Two Types of Reaction after Selfattachment of the Parents
